README

Dataset Source

This project uses the Detailed quarterly report, 2020-2026 of rental bond data from the TenancyServices website: Rental bond data » Tenancy Services for New Zealand. The dataset contains information about Location ID (SA2 code), dwelling type, number of beds, number of total, active and closed bonds and weekly rental statistics.

Dataset: Detailed quarterly report, January 2020 to April 2026

The data was downloaded from Rental bond data » Tenancy Services, which provides publicly available Tenancy bond payment data for transparency, research and analysis.

Scrape Date: 10th of September 2026

Dataset Columns

Column	Description	Cleaning Decision and Reasoning
Time_Frame	Beginning of each yearly quarter	Keep, required for room availability analysis
Location_ID	Geographical identifier code (i.e. Statistical area 2 code - smaller areas within Christchurch) used by Stats NZ to identify a specific areas	Keep, useful for spatial analysis
Dwelling_Type	Dwelling catagory: All, Apartment, Boarding house, Flat, House, Room	Keep, useful for room availability analysis
Number_of_Beds	Number of beds in each dwelling	Keep, useful for room availability analysis
Total_bonds	Total number of bonds paid at the begining of each quarter	Keep, useful for room availability analysis
Active_Bonds	Total number of active bonds at the begining of each quarter	Keep, useful for room availability analysis
Closed_Bonds	Total number of closed bonds paid at the begining of each quarter	Keep, useful for room availability analysis
Median_Rent	Median weekly rent	Keep, useful for room availability analysis
Geometric_Median_Rent	Mean of natural logarithm weekly rent	Keep, useful for room availability analysis
Upper_Quartile_Rent	Upper Quartile weekly rent	Remove (irrelevant information for further analysis)
Lower_Quartile_Rent	Lower Quartile weekly rent	Remove (irrelevant information for further analysis)

Column	Description	Cleaning Decision and Reasoning
Log_std_Dev_Weekly_Rent	Sample standard deviation of natural logarithm weekly rent of bonds lodged within the period	Remove (irrelevant information for further analysis)

N.B.:

- NULL occurs in Time_Frame and on multiple entries.
- NULL and -99 occurs in Location_ID on multiple entries.
- Median_Rent and Geometric_Median_Rent have missing values in one record.

DATA CLEANING:

- Data Set includes entries from 1st of January 2020 to 1st of April 2026. We have cleaned the data and retained the records from from 1st of October 2025 to 1st of April 2026.
- As noted under Cleaning Decisions and Reasons, columns Upper_Quartile_Rent, Lower_Quartile_Rent and Log_Std_Dev_Weekly_Rent were removed.
using the R subset function,

```
df_clean_column <- subset(Tenancy_Rental_Bond_DATE_CLEANING, select = -c(Upper_Quartile_Rent, Lower_Quartile_Rent, Log_Std_Dev_Weekly_Rent))
```
- All “NULL” and “-99” values were converted to NA
using the R function,

```
clean_df_na_Tenancy <- df_clean_column %>% # Convert both literal “NULL” text and “-99” into proper NA values mutate(across(where(is.character), ~na_if(., “NULL”))) %>% mutate(across(where(is.character), ~na_if(., “-99”)))
```
- **clean_df_na_Tenancy** is the cleaned Tenancy Rental Bond Table.
